

DeliveringConnectivity™ to Your Dairy Farm

At KNS, our mission is to create a wireless network ecosystem to support all of our customers' applications at their sites.

The 21st century farms and ranches use extensive technology to manage their operations and improve productivity. Whether you use JDLINK™ to monitor tractor fleets, FeedWatch to manage feeding systems or remote control to program irrigation, all these applications generate data to help you be more productive. Simply put, KNS enables that data transfer.

Technology is the future of the agriculture industry. El-El-O goes to RO-RO-I.

A KNS engineered wireless network can:

- ✓ Allow centralization of data, simplifying management
- ✓ Enable Reliable access to remote applications
- ✓ Effectively use data
- ✓ Facilitate the use of new technologies:
RFID, WiFi, security cameras etc.
- ✓ Use specialty applications to:
 - Track livestock
 - Monitor livestock health
 - Monitor feed
 - Monitor water
