

Get your critical data through a fast, reliable, always secure network.

Revenue and production accuracy drive the need for secure, reliable data from producing assets. However, how do you integrate communications from a newly acquired field, a newly producing field or transfer data from a service person in the field? KNS' wireless network engineers design solutions to solve these challenges.

- ✓ **Integrate a heterogeneous communications network**
- ✓ **Improve and ensure redundant routes for data**
- ✓ **Enable WiFi from the service area to the office**
- ✓ **Leverage IoT capabilities**
- ✓ **Increase scalability**
- ✓ **Increase security:**
 - **Strategically license communications links**
 - **Ensure utilization of current technologies**
- ✓ **Reduce costs through:**
 - **Remote monitoring and management**
 - **Field services productivity**
 - **Network uptime**

Return on investment (ROI)

- ✓ Reduce cost through time saving data transportation
- ✓ Keep your existing SCADA (Supervisory Control and Data Acquisition) systems and equipment

From Rigs to Revenue

From drilling, collection, transportation and processing, KNS can provide the communication infrastructure and services to maximize efficiency and increase ROI. KNS can Design, Deploy and Maintain your core communications infrastructure including: SCADA, microwave, mesh and voice from the rig to the office.
