### Delivering Connectivity™

# Data Conformity Today for Tomorrow's Smart Ports

## Get your critical data through a fast, reliable and secure wireless network.

Modern port and terminal infrastructure is segmented and limited in its ability to evolve continuously as technology advances. Through the engineering and design services and products proved by KNS, Ports and Terminal Operators can:

✔ **Count on a reliable, secure wireless network solution covering all critical infrastructure site-wide**

✔ **Increase internet activity and strength at site**

✔ **Provide security for equipment and personnel**

✔ **Own and control your private network**

✔ **Remain OSHA compliant**

✔ **Incorporate existing software or infrastructure onto singular wireless network solution, including Terminal Operation Systems (TOS)**

✔ **Track, monitor and diagnose your network and equipment remotely anywhere**

✔ **Leverage one wireless network for multiple applications**

✔ **Increase scalability to meet future needs and additional applications**

✔ **Maximize productivity and provide industry leading performance for your customers**

### Return on investment (*ROI*)

✔ **Reduce cost through time saving data transportation and automation support**

✔ **Maintain your existing infrastructure and cargo tracking systems**

✔ **Incorporate RFID tracking for faster loading/unloading speeds and safety**

✔ **Optimize your network performance with situation-specific designs and networks**

## Cargo and Cruises
*Whether your managing cargo or cruise liners, KNS can engineer, deploy and maintain your wireless data solution anywhere in the world.*
